

I am writing in reply to the comments made by The American Radio Relay League concerning Docket ET 03-104.

I strongly support the well founded Comment submitted by ARRL. I feel that the comments made by proponents of Broadband over Power Line (BPL) have little if any credible scientific data to support approval of this docket at this time. I agree that further research and innovations in BPL will be needed to avoid the extreme risk of damaging and irreparable interference to services licensed to operate in the 2 MHz - 80 MHz frequency range.

I am also in agreement with comments concerned about this proposal from a National Security standpoint, in that the excessive and harmful interference caused by this technology would render useless the High Frequency spectrum for all users, including Federal Government agencies concerned with National Security, as well as vital transportation services such as maritime and aviation.

I completely agree that approval of ET 03-104 would violate the existing FCC rules on non-interference, would be contrary to the best interest of the public and the nation, and would be injurious to National Security and Public Safety concerns.
